

# ABORTION PILL REVERSAL

**ANSWERS TO  
YOUR QUESTIONS**

embrace 

## **I took the first abortion pill and I'm having second thoughts. Is it too late to change my mind?**

If you've not yet taken the second abortion pill (Misoprostol) there is hope to continue the pregnancy. The goal is to start the APR protocol within 24 hours of taking the first abortion pill (Mifepristone). However, treatment can be started up to 72 hours of taking the first abortion pill.

## **How do I start the abortion pill reversal process?**

- Call the 24/7 hotline **877.558.0333** or visit **abortionpillreversal.com**
- A Healthcare Professional will then determine if a reversal is possible and connect you to a medical provider to start treatment.

## **How much will this cost me?**

Reversal services are at no cost to you.

## **What about birth defects?**

### **Is my baby going to be OK?**

Neither Mifepristone nor the APR medication are associated with birth defects.
